

# Artificial Intelligence and Decision Systems

Instructions manual for the mini-project electronic submission

## Introduction

This manual describes the procedures for the registration and mini-project submission for the Artificial Intelligence and Decision Systems (IASD) course. This submission system is supported by the well-known Moodle platform.

The URL of this platform is <https://moodle.deec.tecnico.ulisboa.pt/>

## Registration

Registration of students in the Moodle was already performed, with origin in the group registration at fenix. To log in, go to the platform URL above and click on **IST Login**. You will be redirected temporarily to the fenix platform for authentication. On the first login at the Moodle, you will be asked for basic personal data. There is no need to add information, but feel free to do so.

We ask the students to log in and double-check whether they have been enrolled in the course and associated with the right group. (We noticed that some students were not enrolled automatically.)

## Submission of a mini-project

The submission of a mini-project implies the completion of two parts: the Code submission and the Report.

In the Code submission part, upload your code, with the designated filename, at the **Submission** tab. Before uploading, you will find a simple template to guide your implementation. Make sure you click **Save** and you get a “Saved” message back. Then, under the **Edit** tab, you can run your code on a single example by clicking the button with a small rocket (Run), and you can run the public tests by clicking the button with a checkbox (Evaluate). The part of the grade corresponding to the public tests is then shown on the right side after the **Proposed grade** (NOTE: it only shows the part of the grade corresponding to the public tests). Beneath, you’ll see the output of the tests including any execution error. You can edit your submission in this tab, but do not forget to hit the **Save** button to make the change effective. NOTE: the version that will count for final evaluation corresponds to the last saved one. Groups are advised to go to the **Submission** view to double check both the effective submitted version and the evaluation in the public tests.

In the Report part, click **Attempt quiz now** to start a report. After completing the answers, click **Next**. Then, you can revise your report in **Return to attempt**. To finalize the submission, click on **Submit all and finish**. After each submission, you won't be able to change your answers, so that you should only submit a report once sure that your answers are final.

Important notes:

- In case of need, you can submit a new report, but you'll have to re-write it from scratch and will imply a penalization of 0.5 points in the final grade for each re-submission
- Only the last submission will be evaluated
- Reports not submitted will not be evaluated
